

高平台浮动球阀系列 HIGH PLATFORM FLOATING BALL VALVE SERIES

— 产品概述

该系列 O 型球阀具有流通能力大、结构紧凑、密封性能好、寿命长等特点，经济实用、易于维护。广泛应用于石油、化工、天然气、电力、冶金、食品、制药等要求严密切断的场合，也可适用于水、蒸汽、油品、液化气、天然气、煤气等介质。另外可根据客户的需求选择防火型、特殊硬化处理型，提供更安全、更广泛的应用。

— 产品特点

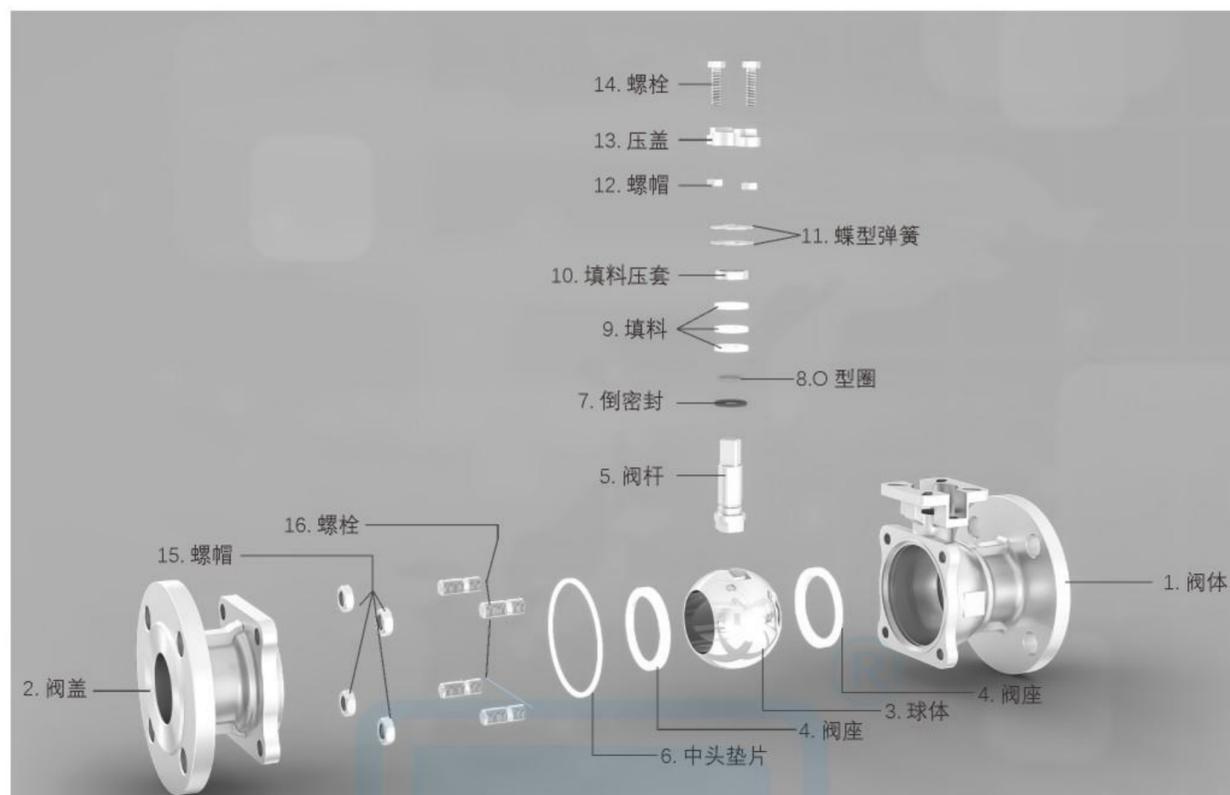

1. 阀体采用精密铸造或锻造，结构紧凑、外观美观。O 型球阀阀芯、阀杆做旋转运动，转动阀芯时阀芯阀座始终紧密接触，具有极强的剪切能力；
2. 可设计阀座由圆柱弹簧或蝶簧预载，具有自动补偿、自密封和阀门中空自动泄压功能，适用于高温、高压场合；
3. 球阀旋转设计能够保证球阀运行平稳，减少操作扭矩；
4. 双关双断设计保证球阀完全开启和完全关闭。多种密封结构可选择，保证使用寿命及可靠性。密封结构可选用阀前阀座密封（推荐），阀后阀座密封，阀前阀后同时密封（特定工况使用）。密封有软硬密封可选择，密封表面可硬化处理，适用于多种工况；
5. 阀门中空自动泄压设计，阀门体腔停留介质温度升高而引起异常升压时，不需通过安全阀，而仅靠阀座功能就可自动泄压，提高阀门在输送液体介质时安全性；
6. 紧急注脂救护，在有些特殊场合，由于介质中的异物或火灾造成阀座密封意外失效，注脂阀提供了与注脂枪快速连接，方便快捷地将密封脂注入到阀座密封部位，缓解泄漏；
7. 球阀有防火结构、防静电结构、防阀杆吹出结构设计；
8. 加长型阀杆设计，可适用于低温场合。

— Product description

This series of O-type ball valves have the characteristics of large circulation capacity, compact structure, good sealing performance, long life, etc., economical and practical, easy to maintain. It is widely used in petroleum, chemical, natural gas, electric power, metallurgy, food, pharmaceutical and other occasions with strict requirements. It can also be applied to water, steam, oil, liquefied gas, natural gas, coal gas and other media. In addition, fire-proof type and special hardening type can be selected according to the needs of customers to provide safer and wider applications.

— Features

1. The valve body adopts precision casting or forging, with compact structure and beautiful appearance. The spool and stem of the O-type ball valve make a rotating movement. When the spool is turned, the valve seat and the valve seat are always in close contact and have a strong shearing ability;
2. The valve seat can be designed to be preloaded by cylindrical spring or butterfly spring, with automatic compensation, self-sealing and automatic pressure relief compensation, self-sealing and automatic pressure relief pressure occasions;
3. The rotating design of the valve ball can ensure the smooth operation of the valve ball and reduce the operating torque;
4. Double-closing and double-breaking design ensures that the valve ball is fully opened and completely closed. Various sealing structures are available to ensure the service life and reliability. The sealing structure can choose the front seat sealing (recommended), the rear seat sealing, and the front sealing at the same time (used in specific working conditions). The seal has soft and hard seals, and the sealing surface can be hardened, which is suitable for a variety of working conditions;
5. The automatic pressure relief design of the valve middle cavity. When the medium temperature of the valve body cavity rises and causes abnormal pressure increase, it does not need to pass the safety valve, but increase, it does not need to pass the safety valve, but can automatically relieve pressure only by the function of the valve seat, improving the safety of the valve when conveying liquid medium.
6. Emergency fat injection rescue, in some special occasions, due to foreign objects in the medium or fire caused by the accidental failure of the valve seat seal, the grease injection valve provides a quick connection to the grease injection gun, which is convenient and quick to inject the sealing grease into the seat sealing part To mitigate the leak;
7. The ball valve has fireproof structure, antistaticstructure, and anti-stem blowout structure design;
8. The elongated stem design is suitable for low temperature applications.

主要零件材料 Material parts materials

NO.	零件名称 PART NAME	材料 MATERIAL
1	阀体 Body	WCB、CF8、CF8M、CF3M 等
2	阀盖 Bonnet	WCB、CF8、CF8M、CF3M 等
3	球体 Ball body	SS304、SS316、SS316L、SS316L + STL 等
4	阀座 Seat	PTFE、PPL、金属密封等 (Metal seal, etc.)
5	阀杆 Stem	304、SS316、316L、17-4PH、S20910
6	中头垫片 Middle head gasket	PTFE、PPL、金属垫片 (Metal gasket)
7	倒密封 Inverted seal	PTFE、PPL、不锈钢缠绕石墨 (Stainless steel spiral graphite)
8	O型圈 O-ring	氟橡胶 (VITON)
9	填料 Filler	PTFE、PPL、柔性石墨 (Flexible graphite)
10	填料压套 Filling clamping ring	SS304
11	蝶形弹簧 Butterfly spring	SS304
12	螺帽 NUT	2H、SS304
13	压盖 Gland of valve	CF8
14	螺栓 Screw	B7、SS304
15	螺帽 NUT	2H、SS304
16	螺栓 Screw	B7、SS304

产品技术参数 Product Specifications

公称压力 Nominal pressure	PN1.6~42MPa、ANSI150LB~2500LB
公称通径 Nominal diameter (mm)	DN15~DN1000
连接形式 Connection Type	法兰 Flange、螺纹 Thread、对焊 Butt welding、承插焊 Socket welding
阀体材料 Body material	LCB、WCB、CF8、CF8M、CF3、CF3M 等
阀座形式 Valve seat form	软阀座、金属阀座 (密封面硬化处理) Soft seat、metal seat (hardened sealing surface)
适用温度 proper temperature	软阀座: -20~ + 200°C 金属阀座: -196~ + 400°C Soft seat: -20~ + 200°C Metal seat: -196~ + 400°C
泄漏等级 Leakage level	ANSI VI
设计标准 design standards	GB/T12237、ASME B16.34
结构长度 Structure length	GB/T12221、ASME B16.10
检测标准 Testing standards	GB/T13927、API598
操作方式 Operation method	手动、气动、电动等 Manual、pneumatic、electric、etc.
可选项 Optional	防静电设计、防火设计、禁油处理、禁铜处理、球面特殊处理、按客户要求涂漆 Anti-static design、fire protection design、oil-free treatment、Copper Prohibition、Spherical special treatment、Customers request painting

产品结构特点

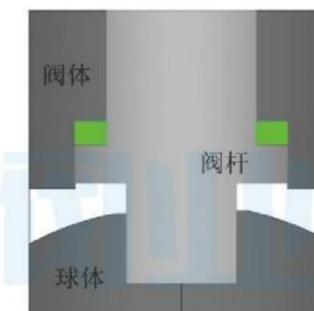

Product structure design features

阀杆防吹出结构设计(见图1)

阀杆防吹出结构设计，下端大上端小的阀杆在上端盖和螺丝的定位下，即使在阀腔异常的情况下，也能保证阀杆不会被介质吹出。

Valve stem anti-blowing structure design (see picture 1)

Valve stem anti-blowing structure design, the lower end is larger and the upper end is smaller. Under the positioning of the upper end cover and screws, even in the valve cavity is abnormal in the case of, it can also ensure that the valve stem will not be blown out by the medium.

防静电设计 (见图2)

固定球阀通过防静电设计使球体、阀杆、阀体形成静电通道。从而将球体与阀座开关过程中由于摩擦产生的静电通过阀体引到大地，防止静电火花可能引起的火灾或爆炸危险。

Anti-static design (See picture 2)

The fixed ball valve adopts anti-static design to make the ball, stem and valve Thebody forms an electrostatic channel. So that the ball and the seat are switched During the process, static electricity generated by friction is led to the ground through the valve body, Prevent the risk of fire or explosion caused by static sparks.

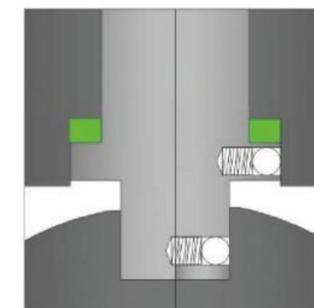

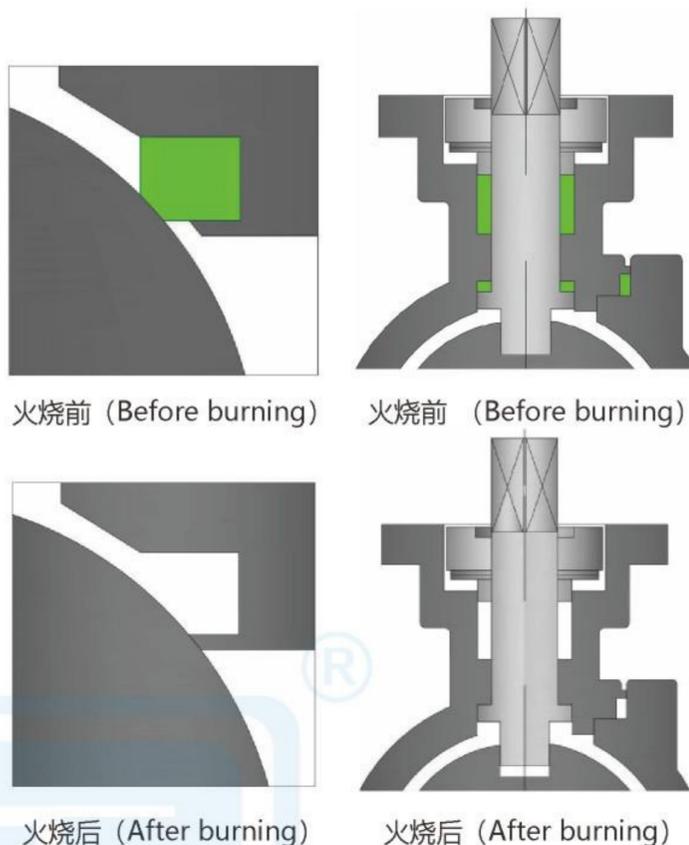

图2 (picture 2)

防火结构设计

当发生火灾时，当非金属材料制作的阀座及密封件在高温下损坏后，特别设计的金属对金属辅助密封结构，有限的防止介质大量泄漏。

Fireproof structure design

In the event of a fire, when the valve seats and seals made of non-metallic materials are damaged at high temperatures, the specially designed metal-to-metal auxiliary sealing structure can prevent a large amount of medium leakage.
